POWER BI | TABLEAU |

Projects

Coaching Management System

streamlines coaching institute operations. It features an admission management module for student applications and acceptance, a teacher assignment function, and an information display system for accessing student, teacher, and course details. The system also includes student management, course management. Developed with HTML, CSS, JavaScript, PHP, and MySQL, this project enhanced my web development and database management skills.

Virtual Chembuddy Android Application

Developed an Android application called Virtual ChemBuddy using Kotlin for the backend and Firebase for the database. The app helps chemistry students by providing features such as virtual simulations of chemical reactions, displaying the results of mixing two or more chemicals. It also includes a library of chemistry books, detailed information, and a comprehensive periodic table. Additionally, the application integrates Firebase for user authentication and OTP services, ensuring secure access. This project enhanced my skills in Android development.

Language

English , Hindi, Marathi (Native)
